Launch Timeline: When iPhone 17 Became Available

Apple unveiled the iPhone 17 on **September 9, 2025** during its fall keynote event. That matches the company's traditional schedule of launching new iPhone models each September.

Pre-orders began the following Friday, and the first units officially hit stores on **September 19, 2025**.

So, from that date, customers in markets where Apple sells the iPhone began getting their hands on the new device — with more retailers and carriers joining shortly after.

Launch Price: How Much Does iPhone 17 Cost?

Despite speculation about a possible price increase, Apple kept the base price for the standard iPhone 17 model at the same level as the previous generation. The starting price is **\$799 (USD)**.

Notably, unlike some earlier models, the base configuration now starts with **256 GB** of storage — a boost from the prior generation.

This price applies to the standard iPhone 17. Other models in the iPhone 17 lineup — such as Pro or Pro Max — may carry higher prices, depending on storage, region, and configuration.

What You Get for the Price: Key iPhone 17 Features

For \$799, you are not just getting a new name — iPhone 17 brings substantial improvements across several areas:

- **Display:** A 6.3-inch Super Retina XDR display with ProMotion — smooth 120 Hz refresh rate, brighter screen, better contrast, and improved outdoor visibility.
- **Cameras:** A new 48 MP Dual Fusion rear camera system, delivering high-resolution photos, better low-light performance, and detailed video. On the front: the new “Center Stage” camera improves selfies and video calls, offering a wider field of view and smart framing.
- **Performance:** Powered by the latest , the iPhone 17 delivers a meaningful boost in processing power and GPU performance — ideal for gaming, multitasking, and heavier workloads.
- **Durability & Design:** With a new “Ceramic Shield 2” front cover, the device boasts 3× better scratch resistance than before, and improved anti-glare coating. That makes it more tolerant to everyday wear and tear.
- **Storage Options:** Starting at 256 GB, and available also with 512 GB, giving more space out of the box than many

base-level smartphones.

Regional Considerations: What Launch Price Means Worldwide

While \$799 is the official U.S. base price, actual cost in other countries may differ due to import taxes, duties, currency conversion, and local retailer pricing strategies. For example, some pre-launch estimates — prior to the official announcement — speculated higher local prices in certain markets.

It means buyers outside the U.S. should expect variation. Always check with authorized retailers in your region for the final price and availability date.

iPhone 17: Is It Worth Upgrading?

If you use an older iPhone (say, two or more generations back), iPhone 17 represents a meaningful upgrade — especially in display quality, camera performance, storage baseline, and processing power. For users who care about performance longevity and modern camera/photo/video capability, the new model delivers solid value at its launch price.

For those with more recent iPhones (e.g., generation just prior), the upgrade may be less dramatic — but if you value top-tier performance, smoother display, and improved durability, iPhone 17 remains a compelling choice. It also positions itself well for future iOS updates due to its enhanced hardware.

Conclusion

The iPhone 17 is officially released — announced September 9, 2025, available in stores from September 19, 2025. Its starting price of \$799 makes it a competitively priced flagship, especially given upgrades in storage, display, cameras, and performance. For many users, especially with older iPhones, this release represents a worthwhile upgrade. Just remember: depending on where you live, final retail prices may vary from the U.S. MSRP.
